

Bien que pour de nombreuses disciplines de Sciences humaines et sociales la production de livres reste la forme majeure de l'œuvre scientifique, la multiplication des revues constitue aujourd'hui un outil essentiel d'animation et de diffusion permanentes dans le milieu de la recherche.

A cette fin, des commissions disciplinaires regroupant des représentants des sections du CoNRS et du CNU, des membres de l'IUF, des personnalités qualifiées étrangères et les délégués scientifiques de l'AERES ont été constituées en 2008 ; elles ont abouti à l'élaboration des premières listes, publiées sur le site de l'AERES et actualisées en octobre 2009.

Ces listes ne constituent pas un cadre contraignant et l'appréciation de la qualité des travaux par les experts reste le critère primordial d'évaluation.

Membres de la commission d'actualisation

Ont ainsi participé à la commission d'actualisation de la liste Psychologie – Ethologie – Ergonomie :

- Nathalie BONNARDEL, IUF
- Elisabeth DEMONT, CNU
- Michel FAYOL, Université Clermont-Ferrand
- Martin GIURFA, CoNRS
- Sonia KANDEL, IUF
- Ludovic LE BIGOT, CNU
- Jean-Jacques RASSIAL, Université de Provence
- Arlette STRERI, IUF
- Simon THORPE, Conseil de l'AERES
- Jacques VAUCLAIR, IUF
- Annie VINTER, AERES

Modalités d'élaboration de la liste

La liste est constituée de l'ensemble des revues référencées dans [PsycINFO](#), d'une partie de celles d'[Ergonomics Abstracts](#), de revues d'éthologie (sélection constituée par des pairs), d'une partie des revues de [PubMed](#) (sélection par le CNU 16° section) et d'une partie des revues de neurosciences [Web of Science](#) (sélection par des pairs). La liste est donc large, intégrant de très nombreuses revues.

La commission a décidé de ne pas caractériser ces revues en fonction d'un critère de qualité scientifique. C'est donc une liste unique, une liste « périmètre », qui est adoptée. Toute publication dans une de ces revues est retenue pour caractériser la production scientifique de l'unité de recherche évaluée.

Toutefois, afin d'aider la communauté scientifique à situer ces revues les unes par rapport aux autres, il leur a été associé un critère descriptif, leur niveau d'impact exprimé en terme relatif et non pas absolu, lorsqu'un tel descripteur était disponible. Le facteur d'impact retenu est celui calculé sur 5 ans afin de tenir compte de la « durée de vie » plus longue des articles en psychologie que dans certaines autres sciences. Il a été calculé de manière relative, c'est à dire rapporté à la distribution des impacts de toutes les revues relevant d'une même sous-discipline (telles qu'elles sont définies dans les catégories de [Journal Citation Reports](#) (JCR)– Science Edition et Social Sciences Edition). Dans le cas d'un journal n'ayant pas de facteur d'impact à 5 ans, c'est celui sur 2 ans qui a été considéré.

On trouvera ainsi associé à chaque revue, l'un des six descripteurs suivants : impact non disponible (N/D), impact excellent, très bon, bon, assez bon et modéré. Le niveau excellent qualifie les 10% de revues présentant le plus haut facteur d'impact relatif (pour les sous-disciplines concernées), le niveau très bon correspond aux revues situées entre les 10% et 25%, bon entre 25% et 50%, assez bon entre 50% et 75% et modéré pour le reste. Lorsqu'une revue relevant de plusieurs disciplines ou sous-disciplines se trouve classée différemment selon celles-ci, le meilleur classement a été retenu.

Enfin, la liste des revues publiées ici n'étant pas exhaustive, il est important d'ajouter que les revues relevant du domaine de la psychologie de la santé (référencées [Medline](#)) sont prises en considération lorsqu'elles sont indexées dans le [JCR Sciences ou Social Sciences](#).

Pour les travaux effectués dans d'autres champs disciplinaires, il convient de se reporter aux listes établies par les commissions d'actualisation correspondantes. Le travail régulier des commissions aboutira à des révisions annuelles.
